“...if we excel in anything, it is in our capacity for translating idealism into action.”

– Charles H. Mayo
EDUCATIONAL OPPORTUNITIES MAY INCLUDE:

- Graduate Seminars in
  - Methods and Foundations in Biomedical Ethics
  - Perennial Challenges
  - Perennial Challenges Continued
  - Ethical Issues in Individualized Medicine
- Directed Readings
- Grant Writing Workshop
- Book Club and Journal Club
- Program Retreat
- Competitive Internal Pilot Grant
- Mentored Research
- Clinical Ethics Practicum
- Genetics/Genomics
- Mayo Medical School Small Group Facilitation

BIOMEDICAL ETHICS RESEARCH PROGRAM

Rapid advancements in medicine, research, and biotechnology have produced bioethical dilemmas and complexities that challenge every aspect of 21st century medicine. Acquiring the skills to critically address these ethical complexities in medicine requires scholarly depth and experience not offered in most clinical training programs. The Biomedical Ethics Scholars Training (BEST) Program is a one-year immersion experience in biomedical ethics designed to meet this need.

The BEST Program combines didactic coursework, structured research opportunities, and relevant service and teaching to provide advanced training in biomedical ethics to clinicians. The Program aims to instill the core knowledge and competencies required to think critically about complex bioethical dilemmas.

WHO SHOULD APPLY?

The BEST Program is ideal for clinical fellows who have scholarly or other interests in biomedical ethics. The Program may also be appropriate for motivated residents, post-doctoral research fellows, and medical students seeking advanced training in bioethics. Applicants should have outstanding academic credentials, demonstrated evidence of scholarly ability, strong leadership potential, and exemplary interpersonal and communication skills.

Applications are due to Dr. Hirsch by January 16, 2017: Hirsch.Jessica@mayo.edu
