BONE & SOFT TISSUE TUMORS: A Multidisciplinary Approach

January 14-18, 2002

Mauna Lani Bay Hotel & Bungalows
Big Island of Hawaii
COURSE DESCRIPTION

**Bone and Soft Tissue Tumors** is designed as a comprehensive review course for orthopedic surgeons, medical and surgical oncologists, radiologists, and pathologists. Clinical, radiographic, and pathologic aspects of bone and soft tissue tumors will be discussed. Course faculty will present a state-of-the-art overview of the diagnosis and treatment of musculoskeletal neoplasms. The latest adjunctive treatment regimens for malignant neoplasms will be emphasized.

Two evening sessions have been scheduled in conjunction with the course. Tuesday evening’s “Stump the Faculty” session will provide an opportunity for course participants to bring and review (35 mm slides, or digital imaging, of x-rays and histologic slides requested) difficult cases with faculty members. Wednesday evening’s session will provide an overview of the histologic diagnosis of bone and soft tissue tumors and tumor-like conditions.

### COURSE HIGHLIGHTS

- Multidisciplinary approach to bone and soft tissue tumors.
- Recent advances in limb salvage surgery, radiologic imaging techniques, adjunctive chemotherapy, and radiation therapy.
- Comprehensive course syllabus and case study synopsis.
- Faculty will review three “unknown” cases each day, beginning the second day of the course. Case x-rays and histologic slides will be available for review throughout the course.
- Microscopes will be available for case consultation with course faculty members.
- **Participants are encouraged to bring 35 mm slides, or digital imaging, of x-rays and histologic slides of their difficult cases for the “Stump the Faculty” session.**

### COURSE OBJECTIVES

At the conclusion of this course the participant should be able to:
