

*Applying Human Factors in Health
Care: Leveraging Multidisciplinary
Approaches to Improve Patient Safety*

Meeting Announcement

OCTOBER 1-3, 2008

*Phillips Hall,
Siebens Building*

Course Description

Improving patient safety continues to be a top priority in health care worldwide. An important tool to accomplish this goal is Human Factors science; the study of how humans perform physically and psychologically within their work environments. The goal of the third annual *Applying Human Factors in Health Care* conference is the application of human factors principles in specific care settings, including the operating room, the emergency room, and the inpatient and outpatient setting.

Our goal for this course can best be accomplished through an integrated multifunction team approach. Accordingly, the target audience for this conference is health care teams including physicians, nurses, administrators, and safety, quality, and human factors professionals.

Join us in building a learning community as we explore solutions to common challenges in patient safety.
