COURSE HIGHLIGHTS
This symposium is designed to give the background on the latest techniques and technology surrounding Endourology and the use of Holmium Lasers in Urology for the management of various diseases. It will also focus on the management of Urolithiasis and Benign Prostatic Hyperplasia. The course structure will include:

- Didactics Lectures
- Video Surgical Demonstrations
- Hands-on training with the latest equipment and work one on one with experts

TARGET AUDIENCE
This course is designed for Urologists, Doctors of Osteopathic, Residents and Fellows in Urology.

LEARNING OBJECTIVES
Upon conclusion of this program, participants should be able to:

- Recognize and describe the safety parameters associated with using lasers in urology for kidney stones and benign prostatic hyperplasia
- Give examples of the use of lasers and their effects as a mechanism of action on tissue and kidney stones
- Analyze the equipment, techniques and detect potential complications for holmium enucleation and ablation of the prostate
- Differentiate the equipment and techniques and distinguish potential complications of lasers in ureteroscopy for stone removal
- Internalize the various procedures for safely performing percutaneous nephrolithotomy and be able to recognize and treat the associated complications.
