March 9-13, 2009

This course will be an update on advances in lung cancer, head and neck cancer, GI cancers, malignant melanoma and selected topics in hematology. Current trends in multimodality therapies will be stressed. The format of the meeting will include didactic lectures from international leaders, discussions and debates on controversial topics, panel discussions with case scenarios, question-and-answer sessions as well as translational/clinical workshops on strategies for cancer treatment/care. This state of the art course is designed for hematologists, oncologists, healthcare providers, and anyone interested in the diagnosis and treatment of malignancies.

- Conference will provide a welcoming and broad platform for in-depth discussion and interaction with many of the leaders in treatment and research malignancies.
- Comprehensive review of selected major solid and hematologic malignancies.
- Challenging and interactive sessions on pertinent issues involved with the care of oncology/hematology patients.
  - Multidisciplinary approaches to patient care
  - Current concepts of molecular genetic studies in melanoma and GI cancer
  - Supportive and palliative care
- Special Sessions
  - Clinical pearls
  - Nicotine dependence
  - Meet the professor
