Institutional Review Board

Human Biospecimen and/or Information Research Repositories Policy

Scope

Applies to personnel at the Office for Human Research Protection (OHRP), Institutional Review Board (IRB), Principal Investigator (PI), investigators, and study staff involved in research when Mayo Clinic IRB is the IRB of Record.

Purpose

To provide guidance to staff at the Office for Human Research Protection, IRB, investigators and study staff who initiate and oversee human biospecimen and/or information research repository activities for the collection, storage, use, and/or distribution of human biospecimens and/or information for research purposes.

Policy

The Mayo Clinic IRB and investigators will ensure that the collection, storage, use, and distribution of human biospecimens and/or information for research purposes adhere to local, federal, and international protections of human subjects.

IRB Responsibilities

The IRB is responsible to:

- Review and approve human biospecimen and/or information research repositories that involve interaction or intervention with human subjects to obtain biospecimens, or that record and maintain identifying private information, which may or may not be associated with biospecimens.
- Evaluate the possible risks, and scientific and/or clinical benefits of the proposed repository.
- Have knowledge of any additional legal or ethical considerations applicable to research using human biospecimens and/or information received from or shared with international or other external collaborators.

Investigator Responsibilities

The investigator is responsible to:

- Ensure that the collection, storage, use, and distribution of human biospecimens and/or information for research purposes adhere to local and federal protections of human subjects, including the Department of Health and Human Services (DHHS) regulations titled Standards of Privacy for Individually Identified Health Information, also known as the Privacy Rule, and its requirements for use or disclosure of Protected Health Information (PHI).
• Obtain IRB approval prior to initiation of human biospecimen and/or information research repository activities. Use of the Mayo Clinic Human Biospecimen and/or Information Research Repository Protocol Template is preferred.

• Use the Mayo Clinic Consent Form Template to develop the written consent form.

• Obtain Biospecimens Subcommittee approval, if applicable. Investigators at an institution for which the Mayo Clinic IRB is the IRB of record will obtain applicable institutional approvals.

• Detail the consent process within the IRB application, or justify a waiver of consent/Health Insurance Portability and Accountability Act (HIPAA).

• Obtain written informed consent from subjects, as applicable, prior to any research handling of subjects' identifiable specimens and/or information.

• Obtain a Certificate of Confidentiality from National Institutes of Health (NIH), if applicable, to protect the confidentiality of repository biospecimens and information. Additional information regarding Certificates of Confidentiality can be accessed at http://grants.nih.gov/grants/policy/coc/.

• Ensure that all research studies that use identifiable repository biospecimens and/or information have obtained separate IRB approval for their proposed use of the repository.

• Ensure that processes are in place, if applicable, for the return of genetic or other results to repository subjects, including provisions for counseling and formal evaluation of risks and benefits to the subjects and, potentially, to members of the subject’s family.

• Ensure that processes are in place for the oversight of repository activities, including access committees, advisory boards, etc.

• Ensure that a Data Use Agreement, as applicable, has been executed for disclosure of a limited data set.

• Ensure that a Material Transfer Agreement (MTA), as applicable, has been executed for the transfer of research materials between the institution and a recipient organization. Have knowledge of any additional legal or ethical considerations applicable to research utilizing human biospecimens and/or information received from or shared with international or other external collaborators.

• Include within the protocol, and among the basic elements of informed consent, a clear description of:
  - The definition, purpose, specific aims, and operation of the repository, including oversight boards, committees, etc.
  - Subject eligibility, involvement, and procedures.
  - Examples of the types of research to be conducted.
  - Genetic analysis of specimens.
  - Permission to access the biospecimens and/or information, including by researchers, federal health agencies, the IRB, etc.
  - Link to subject identity, if any
  - Where and how long biospecimens and/or information will be stored.
  - Conditions under which biospecimens and/or information will be shared both within and outside of Mayo Clinic.
  - Possible risks and management of risks, including risks to privacy and confidentiality, and procedures for protecting the privacy of subjects and maintaining the confidentiality of data.
  - Possible benefits.
  - The repository’s policy (and process) regarding return of individual research results to subjects, including provisions for counseling.
  - Procedure for withdrawal of consent for future use of biospecimens and/or information, and disposition of any remaining biospecimens.
  - Disposition of biospecimens following the death of the subject, i.e. whether the subject wishes that their biospecimen(s) become the property of Mayo Clinic or the property of the subject’s family.
  - Any costs or payments to subjects.
  - Plans for obtaining consent when child subjects reach the legal age of consent.
Justification for any consent or HIPAA waivers requested

Use within Mayo Clinic, or disclosure outside of Mayo Clinic, of identifying private information for research purposes is allowable with subject authorization through the consent process/HIPAA authorization. Possible exceptions to the consent/HIPAA authorization process include use of a limited data set.

The Human Specimen Repository Protocol Template is located in the IRB forms library: http://intranet.mayo.edu/charlie/irb/child-of-page-1/documents-guides/forms-library/

Instructions and language specific to biorepositories have been added to the Mayo Clinic Consent Form Template: http://intranet.mayo.edu/charlie/irb/child-of-page-1/forms-library/informed-consent-template-instructions-and/

Definitions

Data Use Agreement: An agreement into which Mayo Clinic and the investigator enter with the intended recipient of a limited data set that establishes the ways in which the information in the limited data set may be used and how it will be protected.

Human Biospecimen: A quantity of tissue, blood, urine or other human-derived material. A single biopsy may generate several biospecimens, including multiple paraffin blocks or frozen biospecimens. The molecular makeup of such specimens reflects the physiologic or pathologic condition of the person from whom they derive; therefore, they provide sensitive and specific insight into the biologic state of the donor. A biospecimen can include subcellular structures (such as DNA), cells, tissue (such as bone, muscle, connective tissue and skin), organs (such as liver, bladder, heart and kidney), blood, gametes, embryos, fetal tissue, and waste (such as urine and stool). Portions or aliquots of a biospecimen are referred to as samples. (Derived from National Cancer Institute Best Practices for Biospecimen Research).

Human Biospecimen and/or Information Research Repository: A collection of human biospecimens and/or information for research purposes, the physical structure where the collection is stored, and all relevant processes and procedures.

Limited Data Set: A limited data set allows retention of specific elements of identifying private information: geographic subdivisions, town, city, state, zip code, dates, age. Limited data sets are not considered to be de-identified information.

Material Transfer Agreement (MTA): A contract that governs the transfer of tangible research materials between two organizations when the recipient intends to use the materials for his or her own research purposes.
Protected Health Information (PHI): Individually identifiable health information transmitted by electronic media, maintained in electronic media, or maintained in any other form.
